NEOVEST REVEALS ENHANCED ALERTING AND FUTURES TRADING CAPABILITIES WITH 7.0 RELEASE

New York, 15 Oct. 2013 – Neovest, Inc., a leading electronic trading platform provider for buy- and sell-side institutions in the global multi-asset, multi-broker community, is pleased to announce its newest product release, Neovest 7.0.

This latest version includes new enhancements to alerts, customizable views, expanded multi-asset capabilities, and exchange service offerings. With Neovest 7.0, users may now leverage with greater flexibility Neovest’s powerful real-time order analytics to customize a variety of alerts.

Jarrett Sydell, head of Neovest product development, noted: “In response to customer requests to manage working orders more effectively, the new alert functionality allows traders to be notified of movements in a security’s price, volume, first fill, expected completion time, and hundreds of other market and TCA data points.”

Additionally, Neovest’s alerting framework was migrated from each client’s computer to a centralized server to alert users who are not logged onto Neovest 7.0.

Mr. Sydell further stated: “The new global alerting framework now allows users to receive notifications via email on their mobile devices when critical market or order events occur.”

The Neovest 7.0 version allows for enhanced customization within the application. For example, users may now change the overall look and feel of their Neovest application by utilizing modernized pre-defined color and font themes.

Further, Neovest augmented each user’s ability to create powerful formula fields via Neovest’s new Custom Field utility. Fields from live market data feeds, order analytics, target data, order data, and previously defined custom fields may be utilized in this new utility to create custom formulas.

With the 7.0 release, Neovest now provides access to 104 global multi-asset markets and supports single-click futures trading, futures spreads, inter-commodity spreads, European equity options, and options on futures.

Bryce Byers, CEO of Neovest, emphasized: “We’re seeing an increase in the number of desks trading multiple assets globally. By providing access to a broad range of global markets and multi-asset instruments, our clients are able to streamline their processes through one platform on their desktop.”

About Neovest

Neovest, Inc. is a premier global multi-asset, multi-broker electronic trading platform in the financial industry. As an independently operated technology company, Neovest provides a fully integrated front-to-back solution leveraged by the industry's most advanced buy- and sell-side clients. Neovest's unsurpassed flexibility streamlines trader workflow, providing a comprehensive low latency solution for stock, options, futures, and futures options trading. Sophisticated trading tools for single-instrument, pairs, portfolio, and spread trading—combined with broad and innovative pre-, post-, and in-trade analytics and alerting—set Neovest apart. The combination of ETB integration, locates, multi-prime support, allocation, risk and compliance capabilities provide for a seamless electronic workflow. Added robust market data architecture, technical analysis, filtering, and relevant trade content, coupled with global premier proximity solution data centers, provide ultimate resiliency and reliability for mission critical systems. Neovest is a single source of global liquidity access to exchanges, ECNs, broker algo product suites, crossing networks, dark pools, IOIs, and delivers routing to over 300 brokers.
